

Labelling is now required PYROLINE® Rapid fire protection duct system

A new general approval by the building authorities applies to the PYROLINE® Rapid fire protection duct system, type BSKM, from OBO.

This means that when it is used for the enclosure of fire loads (I application), the metal duct system requires labelling with immediate effect.

OBO can also supply the appropriate labelling plate, where fire resistance class, duct type, certification number as well as the name of the constructor and the year of the installation must be filled in.

(Fire protection duct systems made from fibreglass light concrete still don't require labelling, however the installation can be labelled optionally.)

Type	Item No.
------	----------

Typ KS-K DE	7214734
-------------	---------

A self-adhesive labelling plate for the appropriate labelling of a cable duct which is used as an installation duct according to DIN 4102 Part 11.
